Construction

Key Findings - 1

Social environment is more important than the physical environment for predicting older adults' social interactions

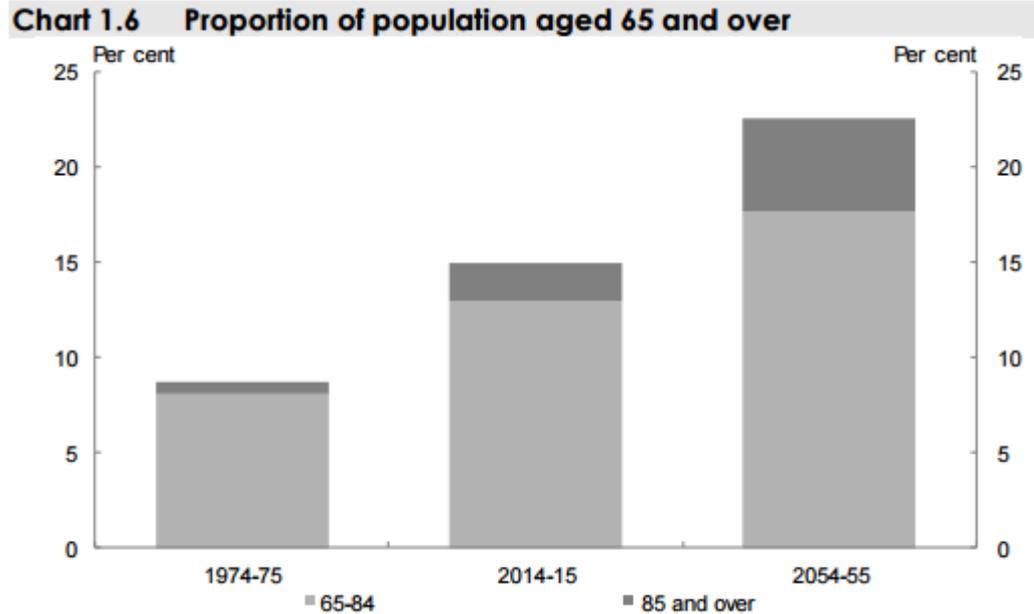

Key Findings - 2

Important (neighbourhood) “third places” for predicting older adults’ social interactions are:

- Cafes/bars/restaurants
- Shops
- Natural environment
- Public open spaces, and
- Footpaths

Challenges of an Ageing Society

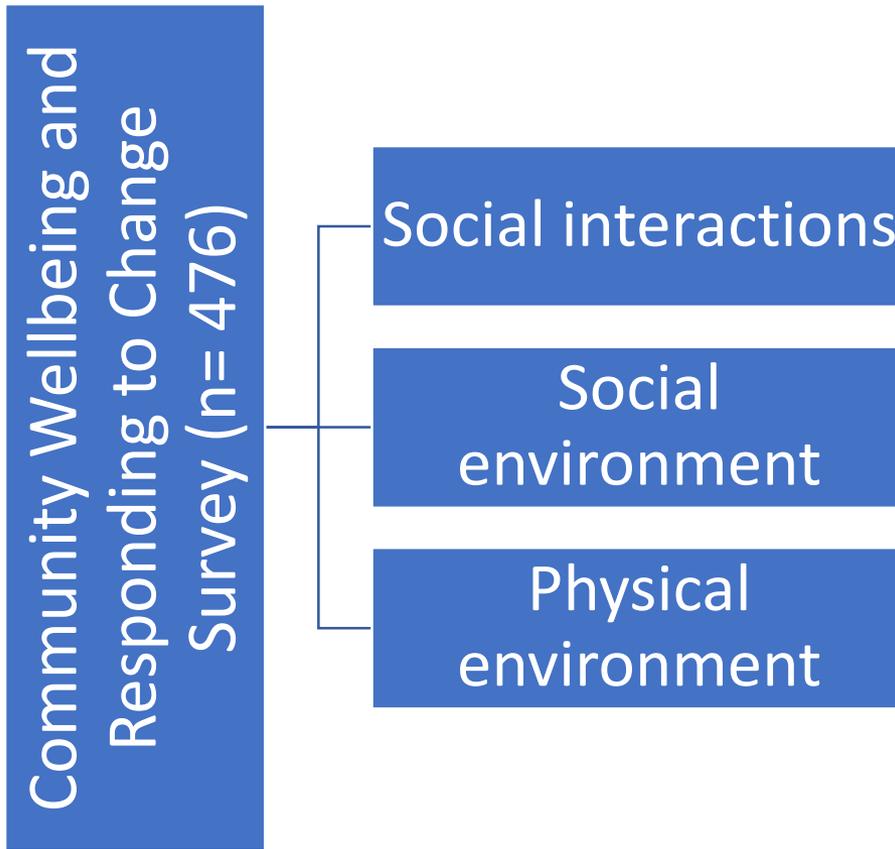

Source: ABS cat. no. 3105.0.65.001, 3101.0 and Treasury projections.

Face-to-face social interactions reduce loneliness and increase wellbeing of older adults

Social and Physical Environments

Global Alliance
For Buildings and
Construction

Survey Results

- 56.7% 65 years old or older
- 52.5% female
- 57.6% retired
- 88.7% homeowners
- 67.8% lived in separate house
- Majority were very satisfied or satisfied with their physical mobility (81.3%) and health (74.0%)
- Respondents spent 5.3 days (during daytime) in and around their suburb

Promoting Policies and Practices for Sustainability

Global Alliance
for Buildings and
Construction

Survey Results

- Majority of respondents were very satisfied or satisfied with their social and physical environment (means of the measures > 3)
- Community wellbeing had a mean of 4.3
- 81.0% of older adults strongly agreed or agreed that their suburb was suitable for older adults

Third Places for Social Interactions

Are Third Places positively associated with more frequent social interactions?

Methodology – Extend Multiple Regression Analyses

Organisers:

International Co-owners:

H3: Higher perceptions of **social interactions in third places** are positively associated with more frequent social interactions

Significant?

Third place	R-squared	Change in R2	p-value
Cafes/bars/restaurants	0.4370	0.0347	0.000 ✓
Shops	0.4520	0.015	0.002 ✓
Natural environment	0.4601	0.0081	0.003 ✓
Public open space	0.4676	0.0075	0.018 ✓
Community places	0.4723	0.0047	0.121
Services	0.4708	-0.0015	0.769
Public transport stops	0.4744	0.0036	0.844
Footpaths	0.4888	0.0144	0.001 ✓

Discussion

- **H1:** Participation in community groups and safety
- **H2:** Perceived physical environment had minimal impact for social interactions
- **H3:** Community places, services and public transport stops were not significant for predicting social interactions in Melbourne

Organisers:

Sustainable Buildings and Climate Initiative
Promoting Policies and Practices for Sustainability

Conclusions

- Perceived social environment is relatively more important than physical environment for predicting older adults' social interactions
- But neighbourhood third places, such as cafes/bars/restaurants, shops, natural environment, public open spaces and footpaths are important for older adults' social interactions

Promoting Policies and Practices for Sustainability

Future Work

- The role of physical environment needs further investigation – next phase of this study
- Digital communication and social media aspect also needs further investigation
